**13<sup>th</sup> to 15<sup>th</sup> May, 2026**  
**Penang, Malaysia**

REVISED VERSION – 13 MAY 2026

# **Greening The Supply Chain: Sustainability Practices For the Future**

## **Conference Synopsis**

This conference focuses on transforming traditional supply chains into environmentally responsible systems that drive both ecological benefits and business value. As climate change, resource scarcity, and consumer activism intensify, organizations across industries must reengineer their supply chain practices to reduce environmental impact while maintaining competitiveness.

The conference will specifically address two complete chemical fibre supply chains: one serving industrial applications and the other serving clothing consumers, as well as other consumers directly related to chemical fibres. This dual-focus approach examines the entire value chain, from raw material sourcing to fibre manufacturing, textile processing, product fabrication, and ultimately to industrial users, brand owners and retailers who bring these products to market. This comprehensive approach recognizes that sustainability requires coordination among all stakeholders, including chemical companies, fibre producers, fabric mills, manufacturers, fashion and home textile brands, industrial product developers, and retail partners.

The conference will explore innovative strategies, technologies, and partnerships that enable companies to build truly sustainable supply chains that are prepared for future environmental challenges and regulatory requirements. Special attention will be given to transparency initiatives, circular economy models, and collaborative approaches that connect upstream manufacturing processes with downstream applications in both industrial and consumer contexts to create holistic sustainability solutions across the entire chemical fibre value chain.
